Experience

Deriv Dubai, UAE
AI Engineer Feb. 2025 – Present

- Built and scaled **JARVIS's multi-agent outreach** across **228K+ mapped partner accounts**, handling **20K+ monthly investigations** to deliver lifecycle-specific guidance for activation and growth; **over 93% of tracked conversations** proceeded without recorded affiliate manager escalation.
- Integrated a **production retrieval-augmented analytics agent** using Google ADK and Weaviate with proactive investigation, reporting and Slack workflows; combined knowledge-grounded SQL and sandboxed Python with persistent task context and scheduled execution.
- Engineered **agent-to-agent APIs and asynchronous execution services** with authenticated access, idempotent requests and signed callbacks; implemented PostgreSQL-backed delivery retries and restart recovery to coordinate long-running analytics and outreach tasks.
- Owned development and deployment of a **full-stack analytics platform** over **13M+ rows**, adopted by **100+ internal users**. Combined React, Flask, PostgreSQL and XGBoost churn and growth models to unify cohort analysis, commission reporting and partner performance.
- Shipped an **AI-assisted prioritization workflow** for partner activation and reactivation, combining lifecycle signals, LLM-generated call briefs, assigned worklists and Slack follow-ups for affiliate managers.

Impiger Technologies Dubai, UAE
QA Analyst & Tester Jun. 2023 – Aug. 2023

- Designed functional, performance and exploratory tests for a streaming application across devices; reproduced defects and worked with engineers to verify fixes.

Selected Projects

verd — Multi-model code review Mar. 2026 – Present
github.com/manaskarra/verd | PyPI | Technical write-up

- Published a Python code review engine on PyPI with CLI, **Model Context Protocol (MCP) server** and Slack integrations; orchestrates up to five independent LLM reviewers through cross-examination before a judge synthesizes findings and preserves evidence-based dissent.
- Achieved **40.0% F1** versus **29.2% for Claude Opus 4.6**—a **10.8-point F1 improvement** in a self-run evaluation on **50 real pull requests** from the Martian Code Review Benchmark; published the methodology and results.

RagaXonic — Neural music generation Sep. 2024 – Jan. 2025
github.com/manaskarra/RagaXonic-DL

- Trained a **3-layer LSTM in TensorFlow** to generate polyphonic MIDI blending Hindustani ragas with Western chord progressions; built a Gradio interface with temperature and note-count controls.

Technical Skills

Languages: Python, SQL, TypeScript/JavaScript
AI & ML: Google ADK, LangGraph, RAG, Weaviate, MCP, Langfuse, TensorFlow, XGBoost, scikit-learn
Web & Data: FastAPI, Flask, asyncio, React, PostgreSQL, Supabase, BigQuery
Infrastructure & Testing: AWS ECS, GCP, Docker, Kubernetes, Terraform, GitHub Actions, pytest

Education

BITS Pilani Sep. 2021 – Jul. 2025
Bachelor of Engineering, Computer Science | CGPA: 8.0/10

Professional Assistant, Digital Design Lab (Sep.–Dec. 2024): Led Verilog/FPGA labs for second-year students.
